

Conduit

Whether you're renovating an existing property or building a new one, OGI has years of experience in voice, data, and video cabling system engineering services. OGI has the expertise to discern key issues for new cable plants and build in the ability to expand with time and keep up with ever-rapid technological advancements.

Cabling

Cable Plant Design/Management involves designing or re-designing the cable plant. After working with the client to create a Cable Plant Request for Proposal (RFP,) OGI manages each step of Cable Plant procurement, including comparisons of vendor's proposals, contract documents, monitoring during the installation process, and a final inspection to ensure quality and that the project meets your satisfaction.

New properties come with their own issues, including designing a conduit and Cable Plant infrastructure that's not only able to support all current technology cabling demands, but able to flexibly accommodate future demands. OGI provides design and development services, construction documents, and creates an RFP to secure the best contractors. OGI also performs value engineering services and manages the Cable Plant procurement, including comparisons of vendor's proposals, contract documents, monitoring during the installation process, and a final inspection to ensure quality and that the project meets your satisfaction.
